TT Premium

The new TT Premium is a one-side, double-coated label paper with reverse side treatment and excellent print image characteristics designed for high character definition and barcode resolution. It has excellent scratch properties giving longevity of barcodes, fewer misreads through barcode readers, high brightness and high resistance to abrasion.

Applications include logistics, identification and tracking labels, used in offices, hospitals, libraries and retail environments. It provides optimum results at speeds of up to 300 mm/sec when used in conjunction with the correct ribbons. It is a forgiving paper, making it highly suitable for operating in harsh environments, such as print and apply machines that operate at intermittent speeds and for rotated barcodes. The matt surface produces crisp images and ensures minimal misreads by providing no reflection.
